MARK NEWTON / INDEPENDENT ENGINEERING

StockPilot

Sales forecasting and replenishment simulator.

24	104	23
PRODUCTS	HISTORICAL WEEKS	AUTOMATED CHECKS

Actual local demo. Locked forecasts, observed sales and calibrated error bands.

WHAT THE TOOL DOES

Five fixed forecasting methods.

Weekly purchase budgets and whole-pack orders.

Editable stock with an explained calculation.

Product-level errors and inactivity review flags.

WHAT THE FINAL TEST SHOWS

192 product-weeks, 10 Oct - 4 Dec 2011.

WAPE: selected 67.6%; mean 65.3%.

Last-year baseline 119.0%; 4 losing SKUs.

90% band: 85.9% empirical coverage.

Python / Time series / Inventory simulation / HTTP APIs / JavaScript

Real historical sales. Stock, costs and lead times are simulated. No client deployment.

The simple mean beats model selection on aggregate test WAPE. No accuracy guarantee.
